

# THANK YOU!

Even if your car is equipped to go much faster, you do drive slowly in a residential area. Right? Similarly, if your car is equipped with a remote locking device with a « beep » or a horn, it does not mean that you should use this system in a residential area. The vast majority of us do not use the noisy car locking « beep » that many car dealerships install on new cars to attract attention.

By deactivating or not using this system you will not wake up your neighbors at night. During the day it will prevent you from disturbing or waking up neighbors that are sick, retired, on vacation, babies, night workers that sleep during the day, etc. You will also not startle pedestrians, cyclists and passing motorists.

You already deactivated the noisy system? Great. Keep this leaflet for the windshield of the next car that will startle or wake you.
