SOUND POLLUTION PETITION

According to the WHO (World Health Organisation) and Health Canada, noises exceeding 45 decibels can affect concentration and also be a nuisance for workers and neighbors. During the day, some residents may also be sleeping because they work nights, others may be sick, on vacation, retired, etc... It was noted that the overwhelming majority of car locking « beeps » exceed 4 to 32 times the acceptable 45 decibels norm.

The undersigned have agreed to reduce sound pollution that can affect the concentration of your staff by eliminating noisy car locking « beeps » emited by their cars.

The undersigned are kindly asking management to help distribute leaflets and to post a sign to allow employees to take notice of this sound pollution and stop it on their own cars.

We thank you for your cooperation.
