

# Thank you!

Workers or neighbors, we all want the best for society.

A quiet environment is important for concentration and sleep. For this reason, many European countries and Japan respect the noise level recommendations from the WHO - World Health Organisation for noise.

In those countries, people lock their cars silently. Without noisy remote locking device that annoy or wake up people. The vast majority of those noisy devices exceed many times the recommendations of Health Canada and the WHO. See the details for your car at: [www.hornfree.org](http://www.hornfree.org). Let's not forget that some people might sleep during the day (night workers, sick people, vacationers, retired people) We all deserve a silent environment. Let's set the example. Thanks for the silence.
